<u>L2G-Lite Reader Windows Code</u>

The L2G_lite_delivery_Windows.tar contains the code to download and use the L2G-Lite Reader in a Windows environment. This code was compiled and modified from the Linux version of L2G and LDOPE to create a native (non Cygwin-dependent) Windows binary version. The Windows tar file is larger in size compared to the Linux version because it includes the native Windows third-party libraries (HDF, HDF-EOS, TIFF, JPEG etc.). The L2G code is dependent on the LDOPE code if you want to compile the source, but is not dependent on it to run the included binary version.
